

TASKS ON A SERVICE

Before the service

- Make sure all mics and instruments are working.
- Set up the SPL meter.

During service

During preaching

- Constantly monitor:
 - Is the stage turned off?
 - Only the right microphone is on? (pulpit/headset)
 - The volume is correct?
 - Is there any distortion?
 - Does the live stream gets a correct input level?

During worship

- Constantly monitor:
 - Did you turn off the preaching mics?
 - Is the volume in a normal range?
 - Do you hear every vocalist?
 - Do you hear every instrument?
 - Is there any distortion?
 - Is there anything that bothers your ear?
 - Does the live stream gets the correct volume?
- **PUT YOUR HEAD OUT** to hear what is really going on.

During worship, when someone speaks or prays

- Mute the effects! Having effect on praying or preaching is very cheesy.
