

# TASKS ON A SERVICE

---

## Before the service

- Make sure all mics and instruments are working.
- Set up the SPL meter.

## During service

### During preaching

- Constantly monitor:
  - Is the stage turned off?
  - Only the right microphone is on? (pulpit/headset)
  - The volume is correct?
  - Is there any distortion?
  - Does the live stream gets a correct input level?

### During worship

- Constantly monitor:
  - Did you turn off the preaching mics?
  - Is the volume in a normal range?
  - Do you hear every vocalist?
  - Do you hear every instrument?
  - Is there any distortion?
  - Is there anything that bothers your ear?
  - Does the live stream gets the correct volume?

### During worship, when someone speaks or prays

- Mute the effects! Having effect on praying or preaching is very cheesy.
